SUMMARY

As a senior engineer with over 7 years of experience, I have a proven track record of helping companies create and maintain a better, more reusable codebase. While mentoring junior developers, I continue to learn from Senior technical specialists/managers. I am capable of smoothly progressing projects from concept to launch. I have a passion for learning and development and wish to demonstrate my skills in a larger development team. I am eager to tackle more complex problems and continually explore ways to maximize user efficiency.

SKILLS

❖ Programming Language

TypeScript, JavaScript/Node.js, HTML, CSS, Python, Java, C++, Go, Dart, Kotlin

❖ Framework/Library

React, React Native, Vue, Next.js, Nuxt.js, htmx, Express, Ktor, D3.js

❖ Tools

Git, Github, webpack, Flutter, Redash, MySQL, MongoDB, PostgreSQL, Firebase, Google analytics, AWS, GCP
big query, Android Studio, Xcode, Docker, K8s, Claude code, Open AI, Gemini

PROFESSIONAL EXPERIENCE

❖ Senior Software Engineer/Tech lead/Lead engineer, Woven By Toyota Aug 2025 — Present Tokyo

Took on cross-functional responsibilities for Woven City-related products, with a primary focus on frontend development extending to backend, data integration, QA, and releases. Drove feature development based on real-world use cases, and contributed to building an autonomous development and release culture by improving technical design, release workflows, Security Reviews, and cross-team collaboration.

- **Designed and implemented** an event-driven survey delivery feature triggered by actual user behaviors. Handled end-to-end development covering frontend UI, backend APIs, Kafka event integration, Databricks pipeline connections, and QA validation to establish a feedback collection infrastructure based on real-world scenarios in Woven City.
- **Proactively identified** specification inconsistencies and technical risks by cross-referencing PRDs, UI designs, backend architecture, data integration, and QA plans. Led alignment among PMs, designers, QA, backend, and data engineering teams, which minimized rework and prevented last-minute blockers before releases.
- **Authored and reviewed** Technical Design Documents (TDDs) to clarify API compatibility, state transitions, DB migrations, concurrency, data contracts, phased rollouts, and frontend impact. Clarified technical risks and team responsibilities prior to implementation, improving design quality and release stability.
- **Developed** primarily in React / TypeScript for the frontend, while also contributing to backend development using Kotlin / Java / Ktor. Led design, implementation, and code reviews from both frontend and backend perspectives, covering UI components, state management, API design/integration, data validation, and downstream pipeline connectivity.
- **Investigated** impacts across multiple frontend codebases in advance and formulated a phased migration strategy that maintained backward compatibility with existing APIs. Supported a release approach that transitioned to new features/APIs without disrupting the existing user experience.

- **Standardized** release workflows, Security Reviews, branch management, and go/no-go meetings. Documented and streamlined processes for RFCs, dependency checks, and release notes, transforming person-dependent release operations into a reproducible, systematic process.
- **Conducted** cross-stack root cause analysis for QA and production incidents spanning the frontend, backend, databases, Kafka, and data pipelines. Isolated issues, assessed the scope of impact, and proposed actionable fixes to help the team determine response strategies quickly.
- **Led** onboarding and technical support for new engineers. Provided guidance on technical design, release workflows, Security Reviews, branching strategies, and implementation policies, fostering an environment where the team could independently develop, review, and release.
- **Proposed and promoted** the adoption of AI tools within the development process. Shared use cases for utilizing AI in design reviews, documentation, research, and coding support, contributing to organizational efforts to improve development efficiency and review quality.
- **Acted as Tech Lead**, taking charge of engineering support, technical design reviews, Code Reviews, release preparation, technical direction, and cross-team coordination. Successfully transitioned technical decision-making, release management, and development processes from a manager-dependent model to a self-sufficient engineering team structure.

❖ Senior Software Engineer, Kanmu.Inc(MUFG Group) Sept 2024 — Jul 2025 Tokyo

- Development and maintenance of cross-platform mobile applications using React, React Native, and TypeScript
 - Worked closely with designers to understand UI/UX requirements and design systems; participated in reviews, provided technical feasibility feedback on constraints and platform capabilities, collaborated on prototypes
 - Ensured code quality through unit and integration testing, while setting up and maintaining CI/CD pipelines
 - Troubleshoot and resolved issues across multiple platforms and devices
- Refactored and modified existing codebase based on the latest design system
- Collaborated with PMs to design and implement A/B testing strategies
 - Wrote and optimized SQL queries for team
- Created content for the company's tech blog
- Proposed, discussed, and implemented technical solutions
- Documentation & Knowledge Sharing Contributions:
 - Identified and documented missing guidelines and technical documentation
 - Created comprehensive onboarding materials for new team members
 - Reduced knowledge silos by converting tribal knowledge into accessible documentation
 - Improved project maintainability and team efficiency through better documentation practices

❖ Tech Lead/Manager - Front-end team, Gakken LEAP.Inc Jun 2024 — Aug 2024 Tokyo

- Investigated issues in the existing architecture, identified technical selection mistakes, and found solutions
- Rebuilt and created integration tests for system migration
- Made decisions on technology and proposals
- Identified bugs and potential issues in the existing code base and created investigation documentation
- Improved code review quality
- Resolved high-difficulty technical challenges, such as customized pdf viewer for high-load page loading problem
- Pair-programmed with team members and helped junior members improve

❖ Senior Software Engineer, Eureka.Inc(Match Group.Inc APAC) Nov 2022 — May 2024 Tokyo

Responsibilities:

- Developed and maintained large-scale toC SPA applications and mobile webviews using agile development methodologies.
- Migrated legacy codebases to modern technology stacks.
- Improved and refined CI/CD processes (Github workflow).
- Gave presentations for knowledge sharing.

Accomplishments:

- Contributed as a senior software engineer in frontend business iteration, team infrastructure development, SSG development, performance optimization, accessibility optimization, and SEO.

- Replaced and refactored legacy projects (PHP, jQuery, WordPress) using TypeScript, Next.js, Contentful, Strapi, Node.js, MySQL etc.
- Upgraded and maintained existing CI pipelines, implemented automated front-end library upgrade processes.
- Gave presentations for knowledge sharing.

❖ Senior Front End Engineer, Zeals.Inc Oct 2019 — Oct 2022 Full-Remote

Responsibilities:

- Developed and maintained large-scale toB and toC SPA applications using agile development methodologies.
- Provided front-end infrastructure support for multiple project teams.
- Developed the back-end for RPA project.
- Optimized build performance, such as Webpack.
- Refactored and maintained legacy codebases, introduced and utilized front-end testing libraries.
- Developed tools and met special requirements for business teams (e.g., Google App Script, LINE mini app).
- Conducted code reviews.
- Mentored junior engineers.
- Gave presentations for knowledge sharing.

Accomplishments:

- Contributed as a senior front-end engineer in front-end sprints, team infrastructure development, performance optimization, and test code development (using TypeScript, React, Redux, JavaScript, Webpack, Jest, etc.).
- Implemented complex page interactions in the internal management platform (drag-and-drop function of complex tree lists, data charts, etc.).
- Took charge of the back-end development of RPA modules (Node.js + express + TypeScript + puppeteer + MySQL).
- Implemented reusable React components, HOCs, UI components, utility libraries and UI component libraries, reducing development time for each team by about 20%.
- Was responsible for Webpack configuration modification and upgrade, shortening build time by 50%.
- Was responsible for the upgrade of legacy projects and the addition of testing processes, reducing QA workload and the occurrence rate of online incidents.
- Was responsible for supporting business teams, developing automation scripts, Line mini programs and project verification prototypes.
- Conducted code reviews and mentored junior engineers.
- Created technical blogs (Qiita) on introducing testing processes and completed multiple knowledge sharing presentations within the team.

❖ Front End Engineer, GEEK.Inc Jul 2018 — Sept 2019 Tokyo

Responsibilities:

- Develop toB and toC SPA applications for clients using technologies such as React, Redux, TypeScript/JavaScript, HTML/CSS.
- Be responsible for the refactoring and maintenance of legacy codebases.
- Develop cross-platform client applications using Dart and Flutter.
- Conduct code reviews.

Accomplishments:

- Contributed as a frontend engineer in frontend business iteration, performance optimization, SEO, etc.
- Developed complex page interactions, such as drag-and-drop functionality, dynamic effects with Three.js, dynamic tables, etc.
- Upgraded legacy projects to reduce project maintenance workload and lower the probability of accidents.
- Quickly learned new technologies (such as Dart and Flutter) and completed development tasks based on customer needs.

❖ Front End Engineer & Android Engineer(Contract), Eight.Inc Dec 2017 — Apr 2018 Tokyo

- Be responsible for the development of the company's official website.
- Be responsible for the UI/UX development of the company's services (HR industry).
- As an Android engineer (Java), work with UI/UX designers and backend engineers to develop client Android applications.

EDUCATION

- ❖ Tokyo Language Education Academy Apr 2015 — Apr 2017
Tokyo
- ❖ Shandong College Of Information Technology Sept 2010 — Jul 2013
Weifang
- Design and production of animation
